The Core Program and Related Services for Nova Scotia Schools

The core program for Nova Scotia public schools consists of the courses and programs that must be offered by all school boards. Beginning with the 1993-94 school year, the requirements for school board offerings will be more specifically defined, as outlined in this paper. These requirements, which will be called "the core" for the sake of brevity, have been selected because they are viewed as essential to supporting the provincial vision of education outlined in the following pages. Many schools currently offer more than the core and many will continue to do so, although priority must be given to the core. The core – what the board must offer – is different from what students are required to take. For example, the core requires boards to offer grade 11 chemistry in every high school, but this does not mean that chemistry is a compulsory subject for all grade 11 students.

The core definition can be expected to evolve over time. The Department of Education will explore, in co-operation with school boards and their staffs, ways in which the core can be enhanced. Changes to the core must be very thoroughly examined before implementation. Proposed additions will be carefully evaluated with respect to the priority they should receive as offerings that should be available to all students. The implications for teaching staff, materials, facilities, and funding must also be investigated in detail before a sound decision can be made on the feasibility of a particular addition.

The core now being established will form a foundation that will be available to all students across the province. As more research is done and as resources become available, we shall build on this foundation to further enhance educational opportunities for young Nova Scotians.

Vision Statement

Preparing all Students for a Lifetime of Learning

Preparing all Students for a Lifetime of Learning

Nova Scotian students live in a society that is changing rapidly.

Dramatic and fundamental changes are occurring in the world. The economy is becoming more diversified and is placing a greater emphasis on information-based enterprises, global competitiveness and sustainable development. Society is becoming more diverse in family structure, language, culture, values and perspectives. There is a growing awareness of global interdependence among peoples and nations. Nova Scotia's future is becoming more reliant upon partnerships and collaboration.

To function successfully in this changing environment, all children in Nova Scotia need a broad based, quality education. Quality in education is demonstrated by the excellence of individual courses, programs and shared experiences. Quality is also demonstrated by the diversity of educational experiences in which students are actively involved and by the extent to which individual student's needs are met.

The challenge of education for the 1990's and into the next century is to offer a school experience that will provide students with opportunities to develop those understandings, skills and attitudes necessary to develop into lifelong learners capable of identifying and solving problems and dealing with change. Students need well developed organizational and interpersonal skills which include working collaboratively with others and developing leadership skills. Students need to be able to communicate clearly, competently and confidently from a broad knowledge base in order to make thoughtful and responsible decisions. Achieving these educational goals will provide the means for students to make connections between what they learn and how they live.

Fundamental to achieving these goals is the development of positive self-esteem by each student. The building of self-esteem is most effectively fostered by a learner-centred school environment which provides opportunities for all students to experience success from a variety of achievements. This should enable learners to build confidence regarding their abilities and competencies and, most importantly, foster an image of themselves as persons of dignity and value deserving respect. Educational programs, services and the teaching/learning environment must be sensitive to the culture and heritage of learners and must actively promote anti-racist principles.

Schools must provide a supportive climate for personal growth and intellectual development.

Our vision of an educated person is of a competent, confident learner able to think critically and participate fully in a democratic society and in a lifetime of meaningful work. A sound education provided in partnership with the home and the community forms the basis for students to become healthy and caring persons having a respect for self and others and a desire to contribute to society as productive citizens.

Schools must work with their partners to support educational innovation and achievement.

A comprehensive education must offer a balanced program of studies which includes opportunities to explore the cultural, aesthetic, social, intellectual, physical, vocational and moral aspects of society. All partners in education must work together to provide a stimulating and supportive environment to assist individuals in reaching their full potential.

The mission of public school education is to provide all students in Nova Scotia with a broad-based quality education that will assist them in acquiring the understandings, attitudes, skills and knowledge essential to becoming responsible and caring educated persons who are competent, confident lifelong learners and valued, contributing members of society.

More specifically, this mission can be addressed through the following learning goals which apply to all students throughout the school curriculum.

Essential learning goals applied across the curriculum are the foundation of education.

- To develop effective language skills and processes and the ability to communicate clearly, competently and confidently for a variety of purposes and through a variety of means and media (COMMUNICATION).

- To understand, appreciate and utilize mathematical patterns, relationships and concepts (MATHEMATICAL LITERACY).

- To identify problems and effectively apply problem-solving strategies to a wide variety of situations (PROBLEM-SOLVING).

- To develop positive self-esteem and respect for others, the ability to use and apply ethical reasoning and accept responsibility for one's actions, and the ability to work collaboratively (PERSONAL AND SOCIAL SKILLS).

- To develop reflective and imaginative thinking (CRITICAL AND CREATIVE THINKING).

- To use technology to solve problems and to encourage individuals to make connections among technology, society and the environment (TECHNOLOGICAL LITERACY).

- To enable students to reflect on their learning, make responsible decisions associated with their own learning, become proficient in finding, evaluating and using information effectively and become an independent, lifelong learner (INDEPENDENT LEARNING).

Education is dynamic and will change to meet new challenges as they arise. Nova Scotia's educational system has accomplished much in the past. Through the practical experiences of educators and research in cognitive psychology, our understanding about teaching and learning continues to evolve. These developments will require schools to refine and change methods and procedures by building upon those exemplary practices which best address the needs of learners.

Nova Scotia's educational system will change to meet new challenges.

Outline of the Core Program and Related Services

The Core Program
For Nova Scotia Public Schools

The following description of the core program for Nova Scotia public schools specifies the programs and courses that must be offered by all school boards effective September 1993.

The means by which these programs and courses are offered may vary. In some cases students may be transported to other school buildings to take a particular course. Small schools may offer high school courses in alternate years or use modified scheduling arrangements such as a semester system to ensure access to the core. Where necessary, consultation between the Department of Education and the school boards will take place on other means of providing core components, such as correspondence study or other types of distance education.

Although the list of programs and courses in the core closely resembles what has been offered, it is important to understand that significant changes in content, processes and methodologies of these programs and courses have been implemented, based on current understandings about students' learning. These ongoing changes include increased opportunities for students at all levels to participate in a variety of learning experiences across subject areas to develop problem solving and communication skills and to have opportunities to explore technology and environmental issues. An ongoing focus is the promotion of cross-cultural understanding as an integral part of the total school experience in order to develop mutual acceptance and understanding among all learners. This is in support of previous initiatives that focus on developing respect for oneself and for others.

Adjustments to the core will be necessary from time to time. For example, the changes to the senior high school program that are currently being phased in will require students entering grade 10 in 1993 to take a grade 12 global studies credit during their high school careers. Global studies will therefore become part of the core by the time the grade 10 students of 1993-94 have reached grade 12. A formal review process for the core program will be developed to enable the Department of Education to respond to changing needs and priorities and continue to move toward the realization of the vision of education described earlier in this document.

CORE FOR GRADES P – 6

These courses and programs are to be offered at each grade level except where specifically noted.

1. Language Arts
2. Mathematics
3. Social Studies
4. Science
5. French (second language for Grades 4-6)
6. Physical Education
7. Art
8. Music
9. Health

Special education will continue to be part of the core program, using specific purpose funding.

CORE FOR GRADES 7 – 9

These courses and programs are to be offered at each grade level except where specifically noted.

1. Language Arts
2. Mathematics
3. Social Studies
4. Science
5. French (Second Language)
6. Physical Education
7. Personal Development and Relationships and Health

Two of the following must be offered at each grade level:

8. Industrial Arts Technology
9. Family Studies
10. Fine Arts (Music or Art or Drama)

Special education will continue to be part of the core program, using specific purpose funding.

CORE FOR GRADES 10 – 12

These courses and programs are to be offered at each grade level except where specifically noted.

1. English Language Arts
2. Mathematics
*3. History (two of 10, 11, 12)
*4. Geography (10 or 11 or 12)
5. Biology (10, 12)
6. Chemistry (11, 12)
7. Physics (11, 12)
8. French (Second Language)
9. One of Economics, Law, Co-operative Education or entrepreneurial related courses (11 or 12)
10. One of Computer Related Studies, word processing or other technology related courses (10 or 11 or 12)
11. Physical Education (10 or 11 or 12)

Special education will continue to be part of the core program, using specific purpose funding.

* When Global Studies becomes a requirement for students the core will change to include two geography and three history as courses that must be offered.

As Integrated Science (10) is developed and implemented as part of the revision of the science program, it will become part of the core and will be offered in every high school. The current Physical Science (10) course will be phased out. Schools that currently offer Physical Science (10) should continue to do so until the Integrated Science (10) course is in place.

Courses in the following programs, 12 to 14, must be offered by each school board but not necessarily in every school.

12. Industrial Arts Technology
13. Family Studies
14. Business Education

[See page 15 regarding alternative education.]

FUTURE DIRECTIONS FOR ALTERNATIVE EDUCATION

Many school boards are currently offering some form of alternative education at the senior secondary level. Existing, provincially approved, senior high alternatives will be recognized for the time being as part of the core in any discussions between the Department of Education and school boards regarding core and non-core components.

To prepare for the full incorporation of senior high alternative education into the core, the Department of Education, in co-operation with school boards, will document current services, courses, and programs for students who are having significant difficulty at the secondary level. This work will be conducted during 1992-93. As part of this initiative, those alternatives that appear to be most promising in terms of the educational and occupational outcomes for students will be identified.

Using this information and the results of an examination of the ways in which successful alternatives are being provided in other jurisdictions, the Department of Education will work with school boards to establish several pilot projects in alternative education for 1993-94. Evaluation of these activities will enable the department, in co-operation with the school boards, to choose the most successful alternatives for inclusion in the core.

The department will then continue to seek ways to improve services to students who, for a variety of reasons (cognitive, behavioral, economic, social, etc.) are not successful in junior and senior high programs. Over the long term, through development of a co-ordinated system of support, we believe it will be possible to increase the number of students whose needs can be met within secondary school programs without placement in separate alternative programs.

RELATED SERVICES

Guidance

Guidance is an essential part of the education of all Nova Scotian students. While the family has the primary responsibility for students' personal and social growth, schools also have a significant role in these areas. Schools have a responsibility as well for the career development and educational planning of students. These responsibilities are met primarily through a planned, comprehensive guidance program delivered by school counsellors, teachers, and administrators. Schools should provide students with guidance and counselling services, to help them make informed and wise personal and career decisions and cope with crises in their lives.

The Department of Education will work with school boards through inservice sessions and summer institutes to assist administrators, teachers and guidance personnel in using a team approach to providing guidance services.

School Library

The school library is an integral component of the educational program, and its goals are supportive of the educational program which it serves. The education program gives direction to the school library service. Teachers and library staff share the responsibility for designing and implementing an effective program which aligns school library services with the curricular and personal needs of the students.

The Department of Education will work with school boards and regional library boards to explore all possibilities of co-operation in the provision of library services to schools to ensure the best use of available resources.

FUTURE DIRECTIONS FOR FINE ARTS

During public meetings held in September 1991 throughout the province regarding the core, concerns were expressed about the feasibility of providing facilities and teachers with the necessary fine arts preparation for the secondary schools in the near future. It was suggested that deficiencies in these areas might lead to establishment of "watered down" fine arts courses that were little more than historical surveys of the arts. Specialist teachers and extensive in-service training were often noted as essential if the fine arts offerings were to fulfil their intended function in the education of young Nova Scotians.

Recognizing the desirability of a fine arts component at the secondary level, the Department of Education will establish a task force involving partners in education to develop a phase-in plan to provide all secondary school students with an opportunity to take fine arts.

Tables

NOTE ON STATUS REPORTS WITH RESPECT TO THE CORE

The following tables were prepared by the Department of Education from information supplied by schools. Because of possible differences in interpretation of terms, and because the information reflects the 1991-92 school year only, these tables should be taken as a general guide to the status of schools with respect to the core, rather than a picture that is complete and accurate in all respects.

TABLE A – Report on Status of All Senior High Schools With Respect to the Core

Group 9 Course and Group 10 Course - These designations refer to the groups of courses under items 9 and 10 of the outline of the core for grades 10-12. Under group 9, boards must offer one of economics, law, co-operative education or entrepreneurial related courses at grade 11 or 12. Under group 10, boards must offer one of computer related studies, word processing or other technology related courses at grade 10 or 11 or 12.
